## 2 EX-104 A19, question 2 (60%)

### Long full-text answer

Use about 60% of your time, answering **one** of three questions:

Write about 1500 words +/- 10%.

1. In your course readings there are a number of ways in which you can define the concept of *globalization* as either a positive or a negative concept, or both: Based on those perspectives, what would you say are key challenges facing Norway or your home country stemming from the processes and dynamics of globalization today? And what relevance does social science have? Outline one or more social scientific debates on the matter that you find relevant.

2. What defines *social science* as a form of knowledge more generally? How would you say the course readings approach and answer that question? Elaborate your answer using two or more examples from the course readings and/or lectures that you find relevant and interesting.

3. In what sense would you say *technology is a key factor* in explaining social change? To the extent of your memory of course readings and lecture notes, what would you say are some key social science positions that can be taken on explaining technology as a catalyst of social change? Use examples from the course materials and lectures to illustrate.
